Web Automation Challenge

The idea of this challenge is to create a small UI test automation suite, for a popular website (www.IMDb.com), using a tool/standard of your choice (preferably Selenium, or equivalent).

The tests should confirm:

1. The Top 250 (http://www.imdb.com/chart/top) page returns **at least 1 movie**, in the list.

2. The previous should be true, for each of the **sorting options**:

3. The previous should also be true, when navigating to the **Western** genre:

Considerations:

When designing your tests, please have in mind the test suite may easily grow to 100's of them. Easy addition, debugging and maintenance should be taken into account.

Submitting your answer:

Please create a Git repository and send us the URL with the solution of the challenge.
